Eleni Goridari
and
Georgios Rafail
Charisoulis*

CRISIS DAY!

**THE BEST-LOOKING
SEC MEMBER**

An interview with **Eleni Goridari** and **Georgios-Rafail Charisoulis** *part two*

If you had the magic ability to solve one problem what would this be and why?

Georgios-Rafail: I believe the most crucial issue that needs to be solved is war. Only once world peace is achieved we'll be able to deal with matters such as world hunger, limited and unsatisfying health care, education inequality etc.

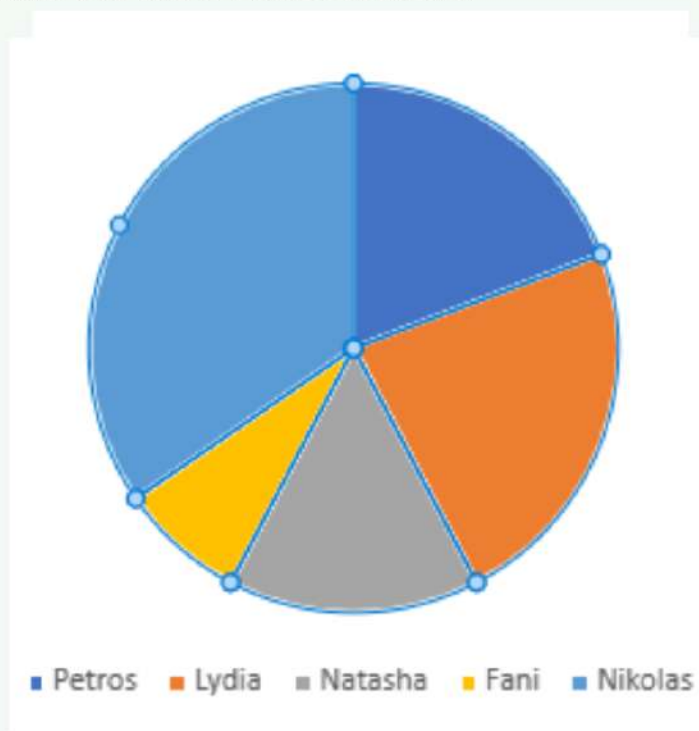

Eleni: I totally agree with what Rafail mentioned. War is indeed the most worrying problem and needs to end. Some other matters that should be dealt with afterwards are overpopulation and justice for everyone.

Can you give a piece of advice to the young delegates, who are now entering the world of diplomacy?

Eleni: Don't be afraid to deliver a speech, to improvise and to have your opinion heard. Don't be afraid to take risks and step out of your comfort zone.

Georgios-Rafail: Think of yourself as the person that is given the chance to change the world. I know that sounds like a cliché, but people who participate in MUNs could potentially become the future diplomats, who will make the world a better place.

THE BEST-LOOKING SEC MEMBER

According to our honorable chairs and with a 35% the best looking secretariat member is NIKOLAS LANGEN!!!! So Nikolas be ready to see your dms full.

Crisis Day at the GA committees

Today each of the GA committees had to deal with its own crisis. The police made an appearance at the GA1 to arrest two methamphetamine dealers and the GA2 witnessed the execution of Thanos' evil plan to make the swift banking system collapse. A worker strike took place at the GA3 and the GA4 was victimized by a terrorist attack which was thankfully stopped by the police.

Digital economy

The digital economy, characterized by the rapid growth of technology-driven industries, has transformed the way we live and work. While it's often associated with economic growth and innovation, it also has the potential to play a crucial role in the protection of the environment.

One of the most tangible ways the digital economy can help to protect the environment is by reducing the consumption of paper. The transition from printed to digital documents, such as e-books, e-tickets, and digital contracts, would significantly reduce the need for paper production.

Digital technology brings people closer by allowing them to communicate regardless of place and time. Virtual conferences and video calls are now common tools used by the vast majority of businesses and organisations. Not

only does this save time and money, but it also decreases the carbon footprint produced by travelling.

Digital technologies, such as the Internet, play a significant role in optimizing energy consumption. Smart meters and sensors enable more efficient energy management in homes and businesses. This results in reduced energy waste and more efficient use of resources, ultimately lowering carbon emissions and energy costs. Thus, carbon emissions and energy costs are reduced, and overall energy is consumed more efficiently.

Digital economy is not all about profit and technological advancement as many believe. It's about us harnessing the power that technology provides us with in order to create a sustainable future for our planet.

Drugtrafficking through Maritime

The global drug trade is a complex and illicit network that spans across continents and oceans. While there are various transportation methods involved in drug trafficking, maritime routes play a significant role in facilitating the movement of illegal drugs across borders.

The global drug trade is a multi-billion-dollar industry that fuels violence, corruption, and addiction. According to the United Nations Office on Drugs and Crime (UNODC), an estimated 275 million people worldwide used drugs at least once in 2020.

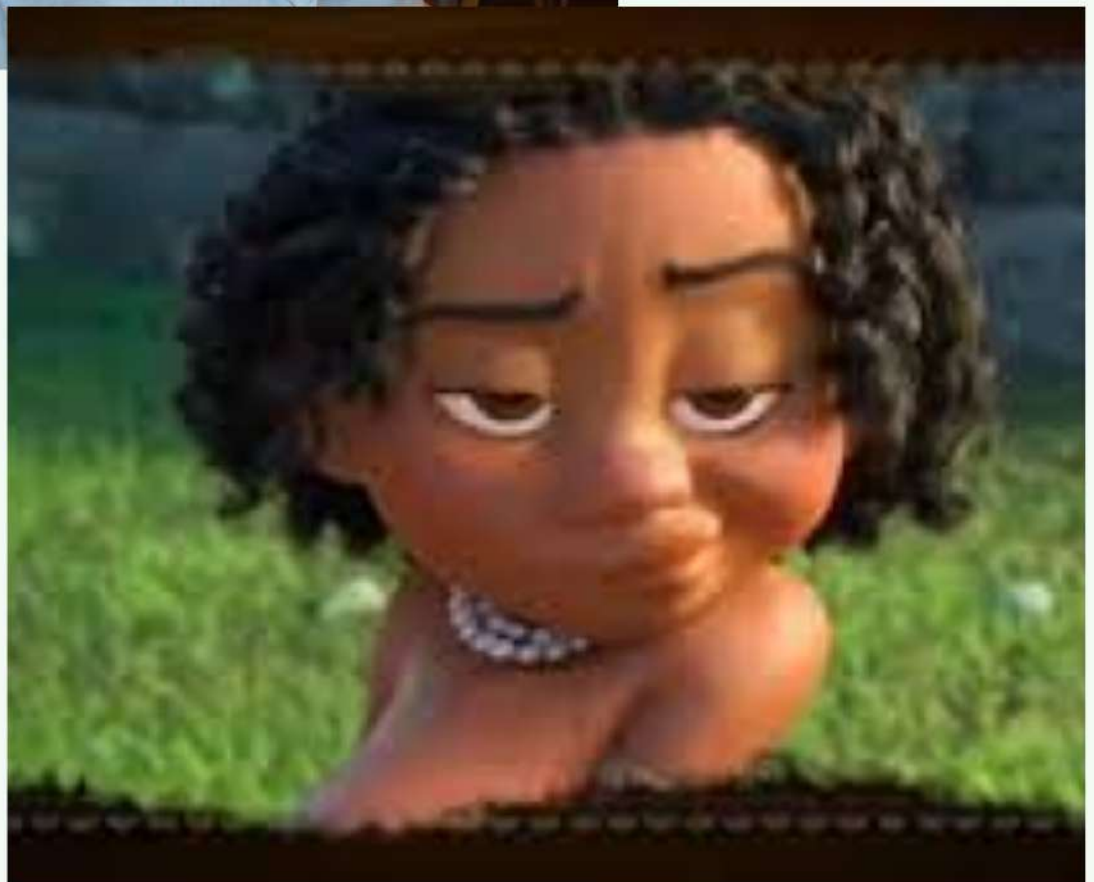

Maritime routes have become increasingly popular for drug traffickers due to their vastness, complexity, and relative ease of exploitation. The rise of containerized shipping has provided traffickers with an opportunity to hide drugs among legitimate cargo, making detection challenging for law enforcement agencies. The vastness of the oceans also offers traffickers a degree of anonymity and reduces the risk of interception.

Certain regions have become notorious hotspots for drug trafficking through maritime routes. For example, the Caribbean Sea is a major transit

zone for cocaine shipments from South America to North America and Europe. Its numerous islands and extensive coastline provide ideal conditions for hiding drugs and evading law enforcement. The Eastern Pacific Ocean is another critical area where drug cartels transport cocaine and other narcotics. This region is notorious for its role in cocaine smuggling. Drug cartels in South America use fast boats known as "go-fast" vessels to transport large quantities of cocaine from Colombia to Central America, from where it is further distributed. Maritime drug trafficking routes have also expanded into the Indian Ocean, with drug shipments originating from Afghanistan and Pakistan making their way towards East Africa and onwards to Europe.

In conclusion, the global drug trade's reliance on maritime routes underscores the need for concerted international efforts to disrupt this illicit network. By implementing robust measures to detect and intercept drug shipments at sea. Only through collective action can we hope to create a safer and healthier world free from the grip of illegal drugs.
